

# *Ansir* Development Limited

## Printing Utilities Tour

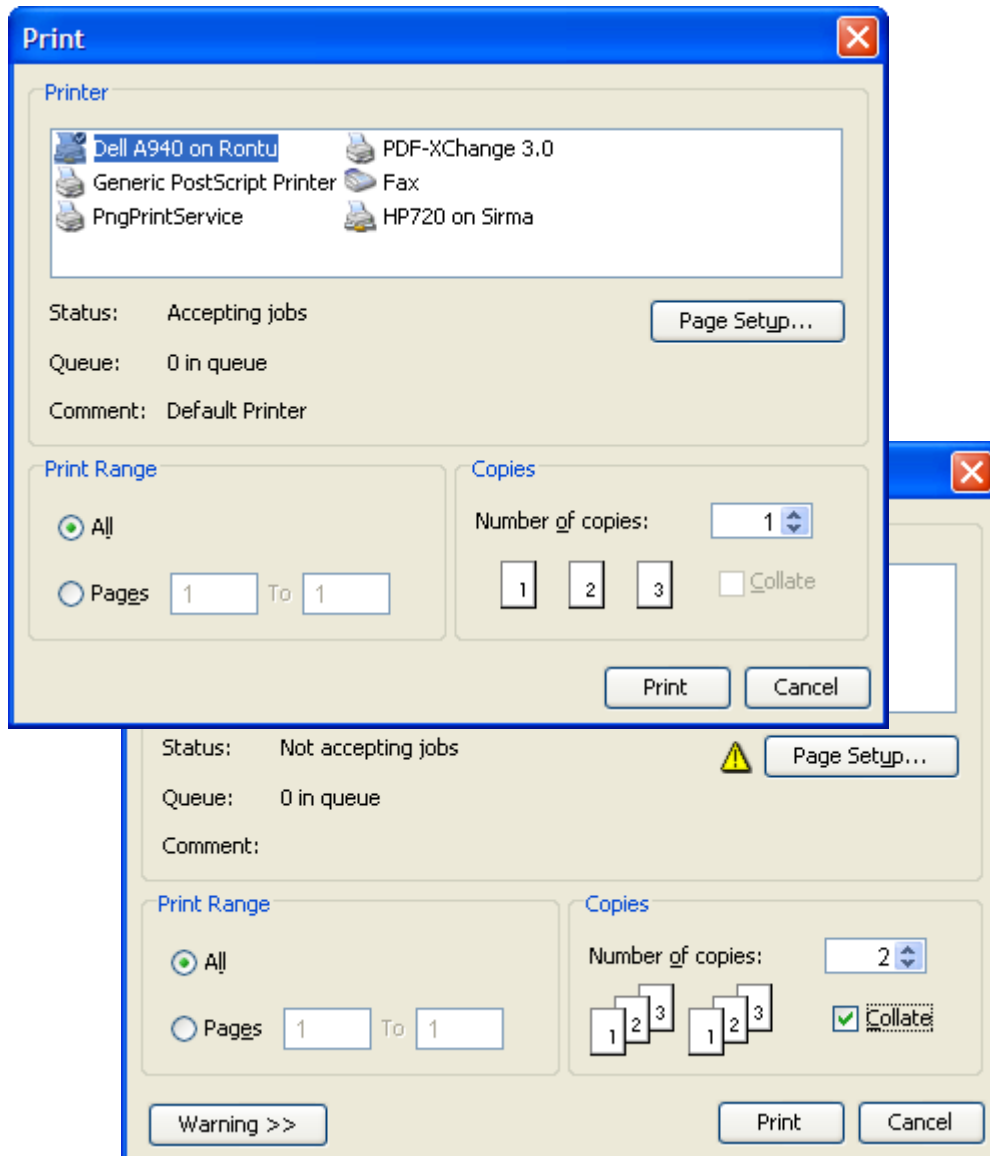

- A pure Swing solution.
- A cross-platform solution.
- A Java printing solution like you have dreamed of is really possible.
- A high quality solution for your printable objects.
- Internationalization support.
- User friendly driven design.

# Swing Action Driven

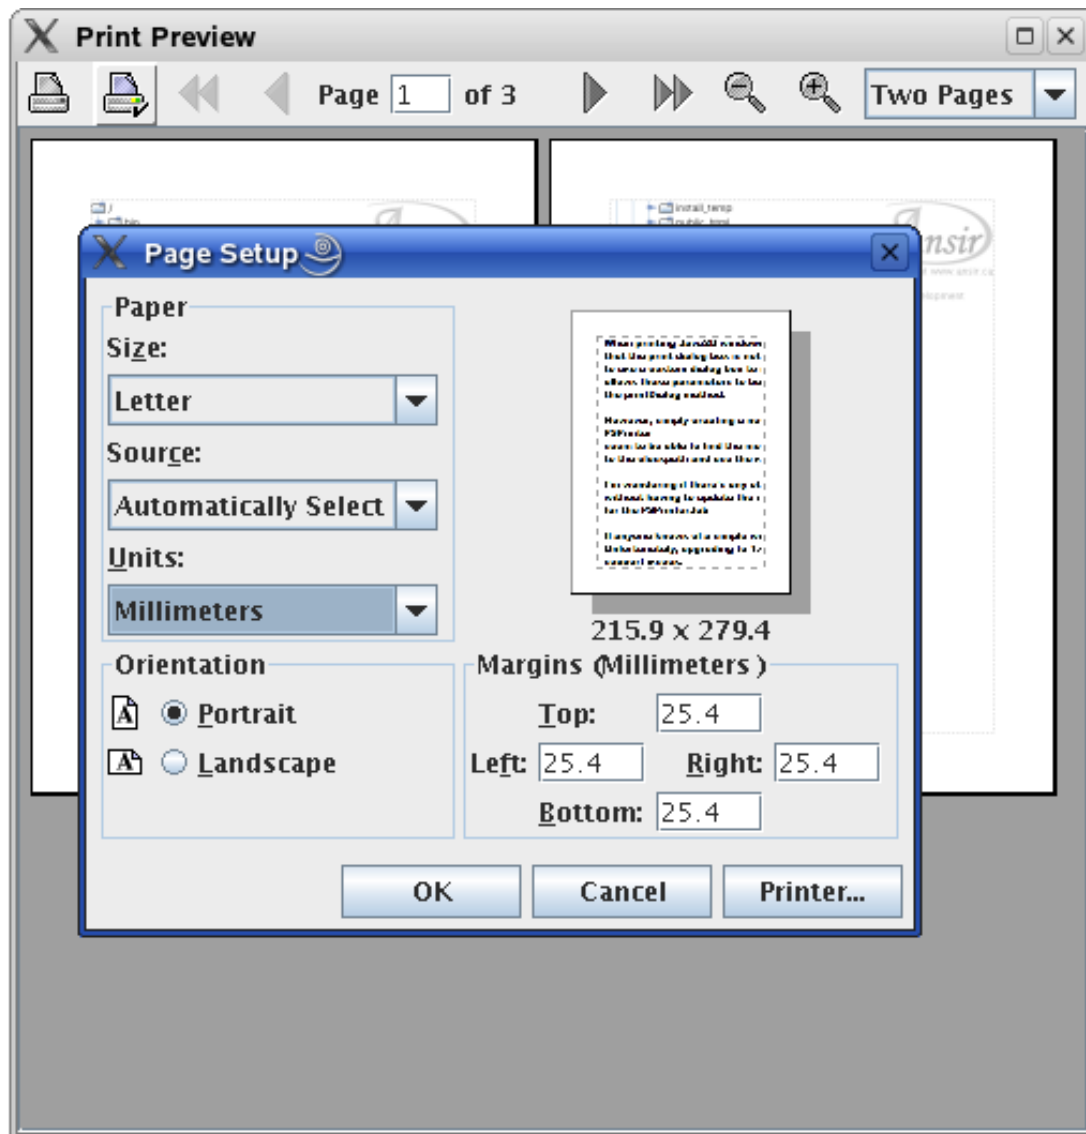

- Action driven page setup, print, and print preview.
- Actions are disabled until the first printer (default printer) is fully explored.
- Additional printers are dynamically added to selectable list as they are explored.
- No more pauses when switching between networked printers on Windows based computers.
- Dynamically add your own Java print services.

# Cross-Platform and User Friendly

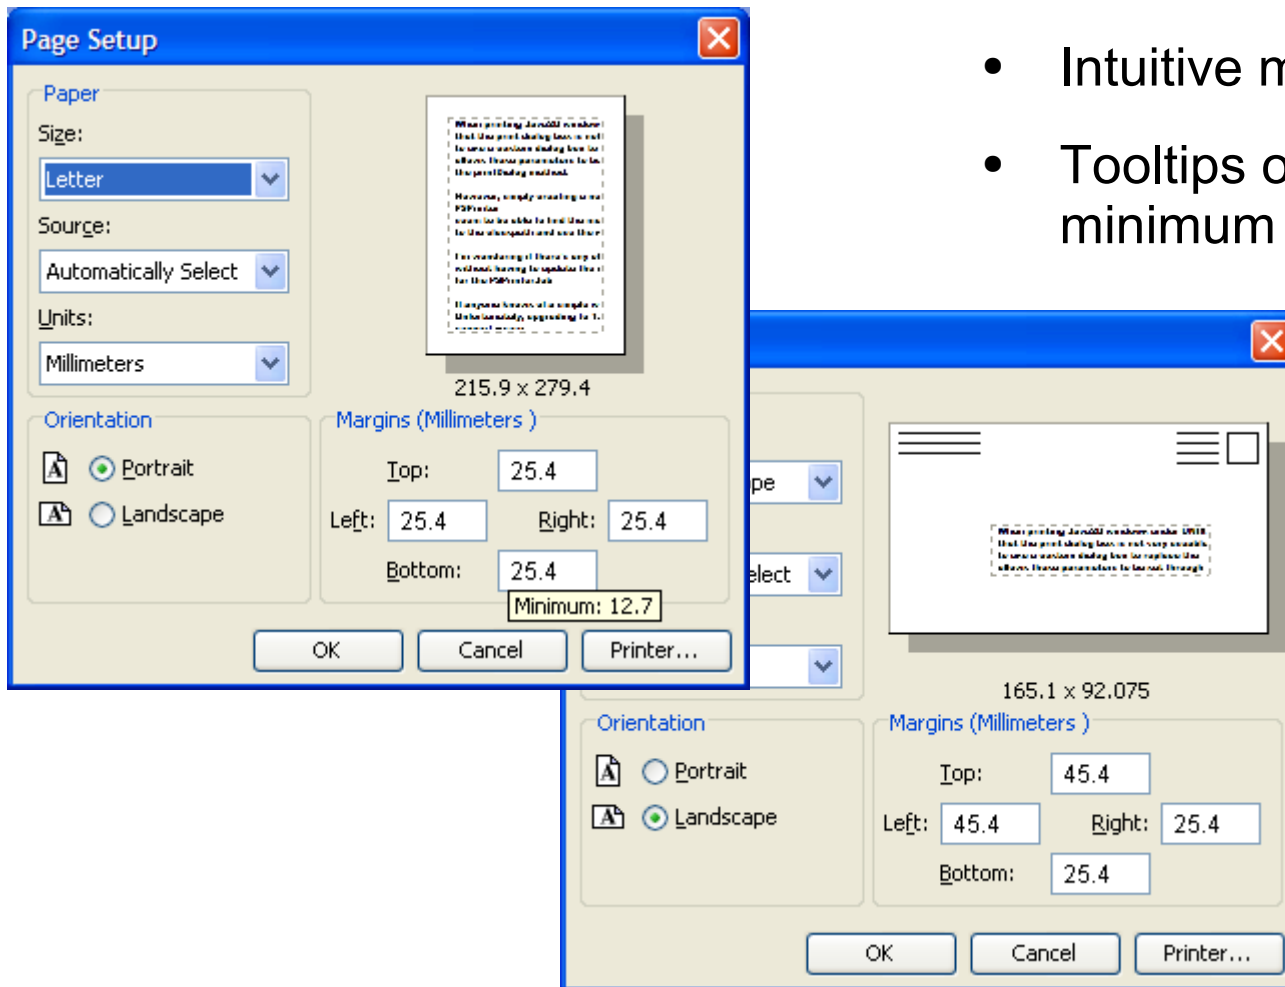

- Cross-platform swing print dialog.
- Printing progress shown when printing.
- Warnings presented when page setup is not available on a newly selected printer.
- Dynamically have your own Java print services appear ready for use in the cross-platform print dialog.

# System Look and Feel

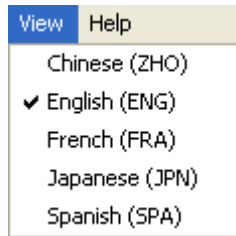

- Automatically uses the appropriate system look and feel.

# Intuitive Page Setup Dialog

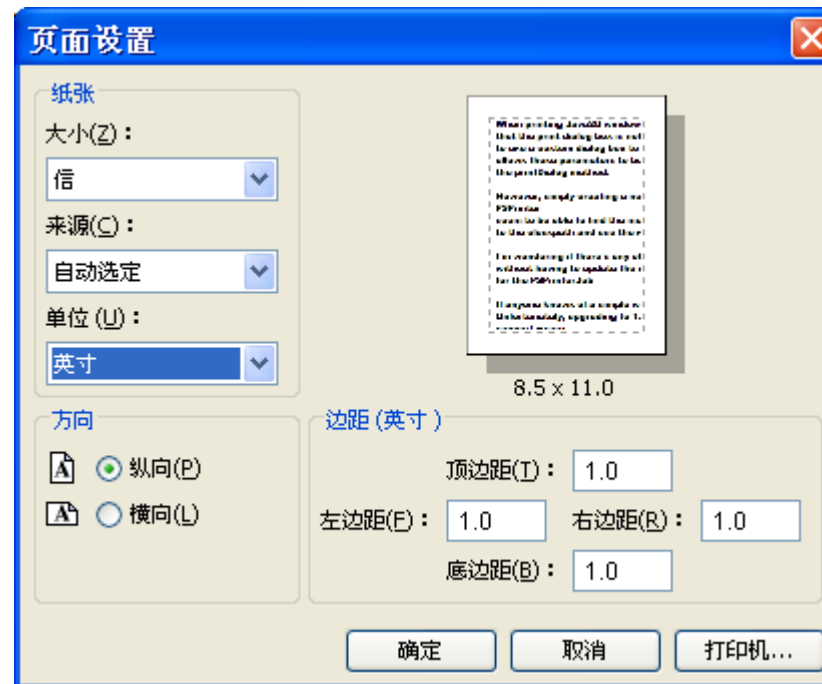

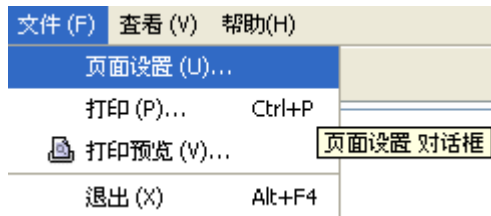

- Intuitive margin placement.
- Tooltips on margins shows minimum printable area limits.

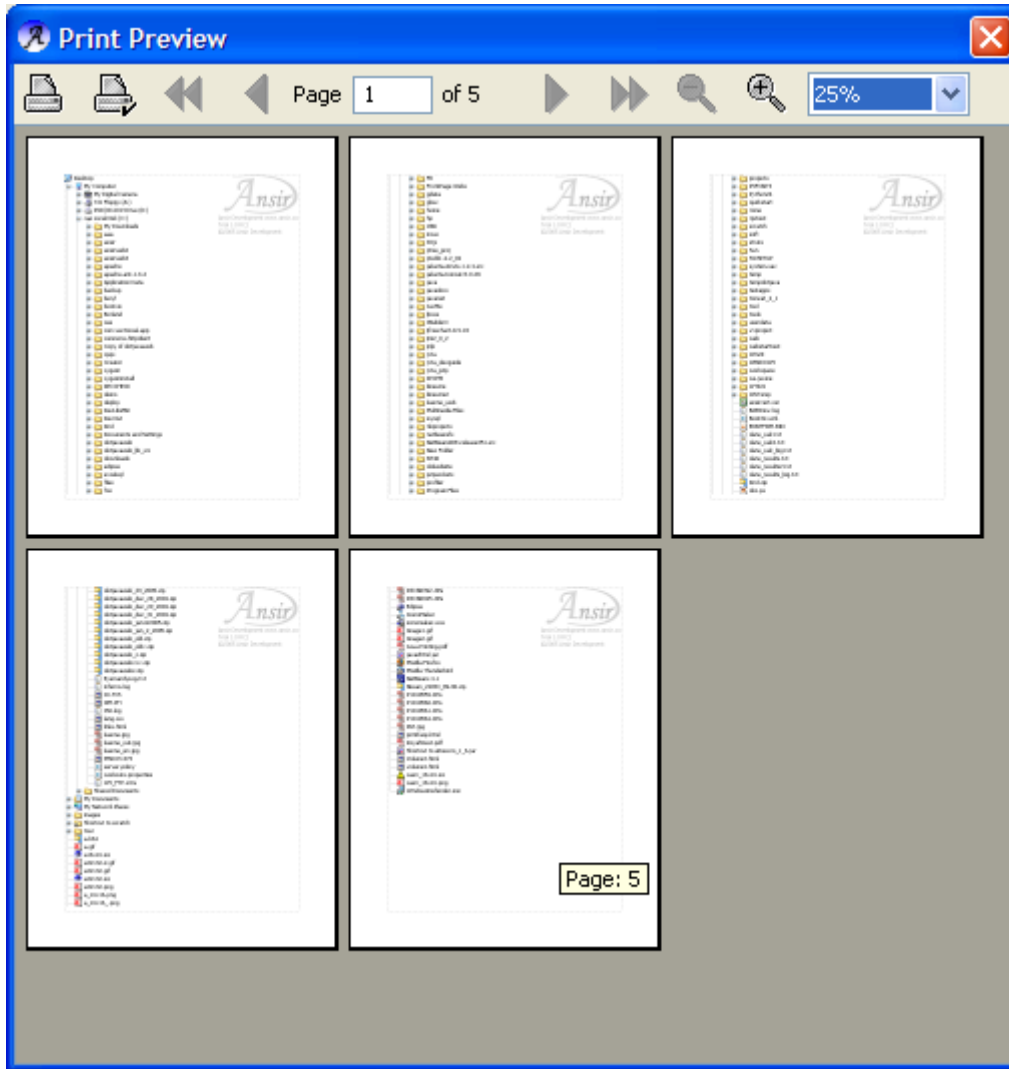

# Internationalization

- Resource driven
- Add your own language or override existing languages
- On-the-fly language updates of action text and tooltips.

# Print Preview

- Print preview with toolbar buttons for: print, page setup, first page, next page, etc....
- Tooltips on the pages
- Zoom and drop down list
- Special views include two page, page width, whole page.
- Fast page layout

# Small Deployment Size

## What is in:

- Small jar size.
- Java Web Start friendly.
- i18n
- Interactive printing progress with an abort.

## What is out:

- No reporting, so you supply your existing printable objects.
- No 3<sup>rd</sup> party dependencies.

# Try the Web Start Demo Now

## Requirements:

- JRE1.5+, Windows, Linux, or Mac OS 10.4+

## Instructions:

- Click the launch icon.
- The demo uses a printable view of your file system and opening several folders allows you to really test drive the print preview.
- The bottom statusbar shows the progress of printer exploration.
- The actions (page setup, print preview, and print) are not available until at least one printer is fully explored. This prevents those annoying pauses when switching between printers.
